

# CASE STUDY: Jazmina Boga - 12-15 years old

Todos Juntos

October 2014

## BEFORE

## AFTER

Jazmina was brought to Todos Juntos in 2011 at 12 years old by a neighbour. Both her parents are alcoholics and drug addicts. The extent of her tooth decay and infection for a 12 year old was tragic. Once her treatment started, Jazmina showed real interest in maintaining a healthy mouth and started brushing her teeth twice a day. Unfortunately, she then disappeared overnight as her brothers were drug dealers and only returned in April this year and finished her treatment, The treatment ended in October 2014 after 4 years and 25 appointments. In between, she lost more than half her teeth.

Thanks to Todos Juntos, she is now a fifteen year old with the confidence to show her new smile.
